# **ELEMENT: 2. ABNORMAL PROCEDURES**

Flyi	ing Standard	Pilot Certificate	Inst Rating
2.1	Take-off run aborted		
•	Hang glider release Monitor hang glider position Conduct avoidance turn to clear hang glider	2 2 2	1 1 1
2.2	Partial Power Failure		
•	On ground, release hang glider, avoid hang glider by using partial power or avoidance turn	2	1
•	In air, if not past point of no return, release hang glider and conduct landing on remaining runway	2	1
•	If past the point of no return, release hang glider with regard given to hang glider landing area	2	1
•	Carry out forced landing if required	2	1
2.3	Order to hang glider pilot, release hang glider		
•	Give hang glider release signal	2	1
2.4	Hang glider unable to release		
•	Recognise hang glider unable to release signal	2	1
2.5 Hang glider and Tug unable to release			
•	Recognise hang glider and tug unable to release signal Knowledge of forced weak link breakage technique Knowledge of limitations of landing in tow	2 2 2	1 1 1

-End of Hang Glider Towing Syllabus-

#### RA-Aus SYLLABUS OF FLIGHT TRAINING

# **UNIT 1.11 – TYPE TRAINING SYLLABUS**

### **ELEMENT: 1. TAKE-OFF AEROPLANE**

Flyi	ing Standard	Pilot Certificate	Inst Rating
1.1	Take off aeroplane		
•	Aeroplane type handling characteristics in regard to high power applications	2	1
٠	Directional control maintained throughout take off	2	1
•	Aeroplane is accelerated and appropriate climb performance is achieved	2	1
•	Due regard for aeroplane limitations regarding flap speeds	2	1

# **ELEMENT: 2. CONTROL AEROPLANE IN NORMAL FLIGHT**

Flying Standard		Pilot Certificate	Inst Rating
2.1	Climb aeroplane		
•	Slipstream effect and asymmetric blade effect	2	1
•	Aeroplane is levelled off from climb at nominated altitude	2	1
2.2	Maintain straight and level flight		
•	Straight and level - normal cruise (adjusting for minor beading and beight corrections)	2	1
•	Straight and level - varying airspeeds (adjusting for minor heading and height corrections)	2	1
2.3	Descend aeroplane		
•	Appropriate airspeed is achieved and stabilised	2	1
•	Aeroplane is levelled off from descent at nominated altitude	2	1
2.4 Turn aeroplane			
• •	Aeroplane is maintained at appropriate AoB Turn is stabilised Turns to nominated headings or geographical features are achieved.	2 2 2	1 1 1

#### RA-Aus SYLLABUS OF FLIGHT TRAINING

2.5 Control aeroplane at slow speed		
<ul> <li>Pre-manoeuvre checks are completed</li> <li>Aeroplane is flown at landing configuration approach speed as specified in Flight Manual in balanced flight</li> <li>Recovery to straight and level flight</li> </ul>	2 2 2	1 1 1
2.6 Steep turns		
<ul> <li>Aeroplane is maintained at appropriate AoB</li> <li>Turn is stabilised</li> <li>Turns to nominated headings or geographical features are achieved</li> </ul>	2 2 2	1 1 1
2.7 Stall and recover aeroplane-clean, no power		
<ul> <li>Correct entry technique for straight and level stall</li> <li>Approaching stall recognised and recovered-without power</li> </ul>	2 2	1 1
<ul> <li>Approaching stall recognised and recovered-with power</li> </ul>	2	1
<ul><li>Minimum height loss</li><li>Recovery when wing drops</li></ul>	2 2	1 1
2.8 Stall and recover aeroplane-flaps (if fitted)		
• Correct entry technique for straight and level stall with flap	2	1
<ul> <li>Approaching stall recognised and recovered-without power</li> </ul>	2	1
<ul> <li>Approaching stall recognised and recovered-with power</li> <li>Minimal height loss</li> </ul>	2 2	1 1
Recovery when wing drops	2	1
2.9 Stall and recover aeroplane in turns with or without flaps and with various power settings		
<ul> <li>Correct entry technique for stall in nominated configuration</li> </ul>	2	1
<ul> <li>Approaching stall recognised and recovered-without power</li> </ul>	2	1
<ul> <li>Approaching stall recognised and recovered-with power</li> <li>Minimal height loss</li> </ul>	2 2	1 1
Recovery when wing drops	2	1

# **ELEMENT: 3. CIRCUITS**

Flying Standard	Pilot Certificate	Inst Rating
3.1 Conduct circuits		
<ul> <li>Take off-controlled and aligned with runway cer</li> <li>Aeroplane Type appropriate circuit profile and procedures</li> </ul>	ntreline 2 2	1 1
<ul> <li>Glide approach and landing</li> <li>Powered approach and landing</li> <li>Touch and go landing</li> <li>Stop and go landing</li> <li>Full stop landing</li> </ul>	2 2 2 2 2 2	1 1 1 1 1
3.2 Cross-wind circuits		
<ul> <li>Take off with due regard for crosswind effect</li> <li>Crosswind circuit profile and procedures</li> <li>Glide approach and landing</li> <li>Powered approach and landing</li> <li>Touch and go landing</li> <li>Stop and go landing</li> <li>Full stop landing</li> </ul>	2 2 2 2 2 2 2 2 2	1 1 1 1 1 1 1
3.3 Short Field circuits		
<ul> <li>Take off with due regard for short field procedu</li> <li>Assessment of landing, go-around and decisior considerations</li> </ul>	res 2 n making 2	1 1
<ul> <li>Appropriate circuit profile and procedures</li> <li>Powered approach and landing</li> <li>Brakes applied and controlled as appropriate</li> </ul>	2 2 2	1 1 1

#### RA-Aus SYLLABUS OF FLIGHT TRAINING

### **ELEMENT: 4. EMERGENCIES**

Flying Standard		Pilot Certificate	Inst Rating
4.1	Emergencies and precautions in the circuit		
•	Aborted take off	2	1
•	Engine failure on take off	2	1
•	Engine failure elsewhere in circuit	2	1
•	Partial power failure	2	1
•	Control failures including flaps, trim, etc. (simulated if required)	2	1
•	Undercarriage or tyre problems	2	1
•	Animal hazards	2	1
•	Engine management considerations	2	1
4.2	Go-around procedures		
•	Procedure from base	2	1
•	Procedure from final	2	1
•	Recovery from an unstable approach	2	1
•	Procedure from overshoot or undershoot position	2	1
•	Procedure after bounce or balloon	2	1
•	Recognition and appropriate procedure from pilot induced oscillation	2	1
•	Awareness of engine management considerations	2	1

# **ELEMENT: 5. FORCED LANDINGS**

Flying Standard	Pilot Certificate	Inst Rating
5.1 Forced landings		
<ul> <li>Initial actions</li> <li>Best glide speed selected and trim</li> <li>Landing area general selection</li> <li>Radio broadcast (mayday)</li> <li>Detailed trouble checks</li> <li>Engine restart (if applicable) and management considerations</li> <li>Activation of PLB/ELT</li> <li>Passenger brief</li> <li>Shutdown checks (as appropriate)</li> </ul>	2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2	1 1 1 1 1 1 1
Go-around height for training purposes	2	1
5.2 Sideslip aeroplane		
<ul> <li>Aerodynamic or airframe limitations considered and complied with</li> <li>Correct entry technique utilised</li> <li>Slip conducted with or without flaps (subject to Flight Manual limitations)</li> <li>Slip is maintained and monitored throughout manoeuvre</li> <li>Slipping turns</li> <li>Correct exit technique utilised</li> </ul>	2 2 2 2 2 2 2	1 1 1 1 1

# **ELEMENT: 6. MANAGE ABNORMAL SITUATIONS**

Flyi	ng Standard	Pilot Certificate	Inst Rating
6.1	Control systems		
• •	Procedures for flight control loss or malfunction Procedures for ancillary control loss or malfunction Airframe including flaps or hatches, etc.	2 2 2	1 1 1
6.2	Other abnormal or emergency situations		
• • • •	Fire, smoke or fumes Recovery from unusual attitudes Collision avoidance including controllability checks Loss of radio or intercom transmissions Airspeed indicator, altimeter or other instrument malfunction	2 2 2 2 2	1 1 1 1
•	Ditching (type specific)	2	1

-End of Type Training Syllabus-
